

Online Lean Healthcare Training Corporate Packages

Develop your organisation's capability to deploy, manage and coach Lean internally.

Why have over 10,000 health professionals from major organisations such as Northern Queensland PHN and Brisbane South PHN completed an LEI Group Lean Healthcare Training Program?

This is because the skills and expertise they have acquired through our programs have proven to deliver ROI of up to 80%, whether it's reduced waiting times or increased access to key health services.

Due to the unprecedented level of demand for our Lean Healthcare Training Programs, we are now offering organisations access to our full range of online Lean Healthcare training courses and resources to make available to your own staff and teams to study, practice and learn.

Our corporate packages also provide your existing internal Lean staff with the content to coach and mentor employees, thereby reducing the reliance on external support and enabling your organisation to expand capacity in a more cost-effective manner.

All courses are delivered 100% online and structured to fit the demanding schedules of your busy workforce. Different packages are available based on the number of required users.

Our corporate packages consist of 22 online courses that cover the relevance of Lean and its application across the entire health sector for every learning level – beginner, intermediate, practitioner and expert. All of our courses are developed and delivered by Lean Healthcare experts and accomplished clinical experts.
